Libby/Libby/Short wrote this text based on their belief that the subject of financial accounting is inherently interesting, but financial accounting textbooks are often not. They believe most financial accounting textbooks fail to demonstrate that accounting is an exciting field of study and one that is important to future careers in business. When writing this text, they considered career relevance as their guide when selecting material, and the need to engage the student as their guide to style, pedagogy, and design. Libby/Libby/Short is the only financial accounting text to successfully implement a real-world, single focus company approach in every chapter. Students and instructors have responded very favorably to the use of focus companies and the real-world financial statements. The companies chosen are engaging and the decision-making focus shows the relevance of financial accounting regardless of whether or not the student has chosen to major in accounting. text will be valuable reading for new students of accounting. This Financial Accounting Workbook provides preformatted templates to facilitate efficient preparation of answers to all Basic and Involved Problems found in the textbook. The Financial Accounting book covers the accounting and reporting cycle, current assets, long-term assets, debt, equity, and cash flows. This material is typically covered in introductory accounting courses and is foundational for all accountants and business people. Students are often overwhelmed by the amount of information presented in the introductory financial accounting course. By focusing on fundamental concepts in a logical sequence, students are able to fully comprehend the material rather than memorise seemingly unrelated terms and topics. The goal of Fundamental Financial Accounting Concepts is to enable students to understand how any given business event affects the financial statements. The “financial statements model” is a highly praised feature because it allows students to visualise the simultaneous impact of business events on all of the key financial statements (the income statement, the balance sheet, and the statement of cash flows). This fresher guide is designed for students who took accounting in their freshman year but struggled with double-entry bookkeeping or have forgotten it and need a quick revision of key accounting adjustments such as accrued expenses, prepaid expenses, bad debt expense, depreciation techniques, inventory valuation, and unearned revenue. The author also discusses the preparation and interpretation of financial statements including the income statement, statement of retained earnings, balance sheet, and cash flow statement. Corporate accounting is introduced, especially the impact of tax, dividends, and the changes to the income statement, statement of retained earnings, and balance sheet. The book is packed with worked examples and four comprehensive case studies that apply the aforementioned accounting concepts. After working through this text, the student should be better prepared for intermediate financial reporting classes. Financial Accounting provides a comprehensive coverage to course requirements of students appearing in the paper Financial Accounting at BCom, BCom (Hons) examinations of different

Indian universities and Foundation Examination (NS) of the Institute of Company Secretaries of India. The book is divided into four sections: Section I explains the fundamental principles necessary for understanding the subject. It covers the entire accounting cycle—from recording of financial transactions to the preparation of final accounts. Section II deals with accounting problems related to certain specific types of business transactions. Section III deals with partnership accounts. Section IV provides suggested answers to recent examinations’ questions. Never HIGHLIGHT a Book Again! Includes all testable terms, concepts, persons, places, and events.
