Fatalities and serious injuries can occur if cranes are not inspected and used properly. The purpose of the study was to evaluate the industrial crane and hoist safety program at company XYZ to reflect best practices and promote effective implementation and compliance to organizational standards and expectations. This study was accomplished through an assessment and inventory of the crane and hoisting material of company XYZ to develop an accountability system that would promote adherence to the developed crane and hoist policy. The findings following the inspection indicate few elements of the safety program were missing, such as employee and management participation during the equipment inspection, and gaps in the company accountability system. Finally for the completion of this evaluation, several recommendations were provided to increase the effectiveness of the safety program, for instance the automation of the inspection process to help control inventory of equipment, and retrieve information such as their maintenance deadlines, load ratings, guidelines for safe use, the risks involved and what to do in case of an emergency. Rigging, Hoisting, and Signaling Practices is an introduction to the equipment, calculations, and procedures required for the safe handling and transportation of materials by hoists or cranes.
