Managing Change in Organizations: A Practice Guide is unique in that it integrates two traditionally disparate world views on managing change: organizational development/human resources and portfolio/program/project management. By bringing these together, professionals from both worlds can use project management approaches to effectively create and manage change. This practice guide begins by providing the reader with a framework for creating organizational agility and judging change readiness. For twenty years, southern Sudan has been the site of a tragic and brutal civil war, pitting the northern-based Arab and Islamic government against rebels in African marginalized areas, especially the south. More than two million people have died and four million have been displaced as a result. In 1999, a new element radically changed the war: Sudanese oil, located in the south, was first exported by the central government. The human price of this bonanza is immeasurable. The government, using oil revenues and aided by co-opted southerners, rained a scorched earth campaign of mass displacement, bombing, and terror on the agro-pastoral southern civilians living in and near the oil zones. The displaced number in the hundreds of thousands. "The FreeBSD Handbook" is a comprehensive FreeBSD tutorial and reference. It covers installation, day-to-day use of FreeBSD, Ports collection, creating a custom kernel, security topics, the X Window System, how to use FreeBSD's Linux binary compatibility, and how to upgrade your system from source using the "make world" command. Merciless. Relentless. Unstoppable. The first intelligent species to encounter mankind attacked without warning. Merciless. Relentless. Unstoppable. With little hope of halting the invasion, Earth's last roll of the dice was to dispatch three colony ships, seeds of Earth, to different parts of the galaxy. The human race would live on . . . somewhere. 150 years later, the planet Darien hosts a thriving human settlement, which enjoys a peaceful relationship with an indigenous race, the scholarly Uvovo. But there are secrets buried on Darien's forest moon. Secrets that go back to an apocalyptic battle fought between ancient races at the dawn of galactic civilization. Unknown to its colonists, Darien is about to become the focus of an intergalactic power struggle where the true stakes are beyond their comprehension. And what choices will the Uvovo make when their true nature is revealed and the skies grow dark with the enemy? Insect pests are becoming a problem of ever-more biblical proportions. This new textbook collates a series

of selected papers that attempt to address various fundamental components of area-wide insect pest control. Of special interest are the numerous papers on pilot and operational programs that pay special attention to practical problems encountered during program implementation. It's a compilation of more than 60 papers authored by experts from more than 30 countries. Includes all works deriving from DOE, other related government-sponsored information and foreign nonnuclear information. The Tale of Tea presents a comprehensive history of tea from prehistoric times to the present day in a single volume, covering the fascinating social history of tea and the origins, botany and biochemistry of this singularly important cultigen. First published in 1993, The Ultimate Cigar Book has become a classic in its field, and is generally credited with having helped launch the current cigar smoking craze. It has been reprinted numerous times in the United States, and is now sold worldwide. No other book contains as much detailed and factual information on virtually every facet of cigar making and cigar smoking. And now this trendsetting been has been revised in this fourth edition for the aficionado of the future! Forget 1492. This book starts out in B. C. (Before Columbus) and transports the cigar enthusiast on a fun and fact-filled adventure into virtually every realm of today's popular and growing cigar smoking pastime. Written by one of the most knowledgeable and internationally-celebrated pipe and cigar authors of our time, Richard Carleton Hacker's well-known wit and wisdom will keep the reader enthralled with every turn of the page, as he takes you on an information-packed would tour of cigars. Starting off with a history of cigar smoking, the author then shows us how cigars are made today (handmade, handrolled, and machine made), divulges the secrets of finding the

“perfect” cigar, and discusses the ritual of smoking and how to properly care for and store our cigars. From there the book lists a number of innovative cigar accessories, suggests which beers, wines, whiskeys, brandies, and cognacs go with what cigars, enlightens us with a chapter on cigar smoking celebrities, and concludes with the world’s first International Compendium of virtually every cigar brand known today, complete with histories and observations on taste, according to the author’s HPH (Highly Prejudiced Hacker-Scale) ratings. If that was not enough, there is even a dictionary of CigarSpeak! The Ultimate Cigar Book is the most comprehensive, factual, and up-to-date book for the cigar smoker or for those who just want to learn more about the fascinating and popular world of cigar smoking. Project Management Institute has introduced Implementing Organizational Project Management: A Practice Guide to assist organizations in developing and defining effective project management methodologies. In a 2012 PMI market research project, more than half of the respondents identified a lack of published guidance on development of customized methodologies. This practice guide outlines practical knowledge and steps to define and develop a methodology in alignment with the foundational standards and framework that were first provided in PMI’s A Guide to the Project Management Body of Knowledge (PMBOK® Guide). Este libro se estructura partiendo de conceptos que se consideran fundamentales para conocer el comportamiento (cómo se mueve) de un xenobiótico (toxicocinética) y que en relación con la dosis recibida son factores determinantes de la intensidad de los efectos tóxicos que cabe esperar o se van a producir. Posteriormente se pasa a desarrollar -de forma más o menos extensa- grupos de sustancias tóxicas que se

encuadran en capítulos específicos. En los diferentes capítulos se respeta, generalmente, la siguiente estructura: toxicocinética, toxicodinámica, efectos secundarios y clínica de la intoxicación, diagnóstico, dosis tóxicas y tratamiento. El uso que puede tener este libro se entra sobre médicos hospitalarios y extrahospitalarios -hagan o no urgencias- de atención primaria y rurales, emergenciólogos, médicos forenses, especialistas en medicina del trabajo y medicina legal, diplomados en enfermería, personal de protección civil y encargados del transporte sanitario, veterinarios, farmacéuticos, estudiantes de las ramas sanitarias y estudiosos interesados en el campo de la toxicología. This book looks closely at herbal product development and commercialisation. In spite of an ever-growing demand, there is a dearth of safe and effective herbal products that meet consumers' expectations. Therefore, this book takes it upon itself to elaborate on the development process of herbal insecticides, repellents and biomedicines from a commercialisation point of view. The introductory chapters deal with the various strategies for disease vector control and provide an overview of herbal biomedicines. The subsequent chapter describes plants with mosquito larvicidal activity, including a comprehensive list of lethal concentrations against different mosquito species. The chapter on Himalayan plants discusses potential botanical insecticide sources and their chemical constituents before delving into the topic of natural insecticides of microbial origin and their efficacy against mosquitoes. Plant-derived insecticides belonging to different chemical classes and the extraction, purification and characterisation of bioactive compounds are illustrated, as well. The recent technological advances in the formulation of microbial, biochemical and botanical insecticides are also

reviewed. Three chapters focus on important medicinal plants useful for treating human ailments, with special reference to the traditional healing practices of northeastern India. This is followed by a chapter on the production, use and safety of biopharmaceuticals and edible, plant-based vaccines. The intellectual property issues related to herbal products in India including patents, trademarks, geographical indications, trade secrets and traditional knowledge resources are plainly examined. The book ends with a chapter on the herbal product registration process in India, wherein the data requirements for registration, clinical efficacy trials, toxicity studies, quality control, packaging and labelling are clearly explained. In conclusion, this book is a step-by-step guide for the development of safe, effective and commercially viable herbal insecticides, repellents and biomedicines. The book brings together research topics having a broad focus on human and climate change impacts on the terrestrial ecosystems in the tropics in general and more specifically from the most significant and vulnerable Himalayan ecosystem. A total of 16 contributions included in the book cover a diverse range of global change themes such as the impacts of changing temperature and precipitation on soil ecosystems, forest degradation, extent and impacts of invasive species, plant responses to pollution, climate change impacts on biodiversity and tree phenology, environmental changes associated with land use, importance of traditional knowledge in climate change adaptation, timberline ecosystems, and role of integrated landscape modeling for sustainable management of natural resources. The book is a collective endeavour of an international multidisciplinary group of scientists focused on improving our understanding of the impacts of global change on the structure and

functioning of tropical ecosystems and addressing the challenges of their future sustainable management. We hope that the book will help researchers working in the areas of ecology and environmental science to update their knowledge. We also expect that natural resource managers and policy planners will find explanations for some of their observations and hypotheses on multiple global change factors impacting tropical ecosystems and especially Himalayan ecosystems. This book reviews the scientific basis for nutrition risk criteria used to establish eligibility for participation in the U.S. Department of Agriculture's Special Supplemental Nutrition Program for Women, Infants, and Children (WIC). The volume also examines the specific segments of the WIC population at risk for each criterion, identifies gaps in the scientific knowledge base, formulates recommendations regarding appropriate criteria, and where applicable, recommends values for determining who is at risk for each criterion. Recommendations for program action and research are made to strengthen the validity of nutrition risk criteria used in the WIC program.
