The work covers military signaling and the weather service. The latter brand was transferred in 1890, to the Weather Bureau, organized under the Dept. of Agriculture. If you want to read about another person's obsession this is a book for you. It recounts how I and a band of friends in Sweden and abroad listened to signals from satellites from the secretive Soviet Union and other nations throughout the Cold War years and beyond. You will read about how we kept a watch on cosmonauts and secret satellites using simple equipment - always on "the trailing edge of technology". Richard Flagg, Robert Christy and Mark Severance have contributed chapters that provide their perspective on our common obsession. We were all part of the Kettering Group of satellite trackers led by the legendary Geoff Perry. Under orders from General Sheridan, Captain W. P. Clark spent over six years among the Plains Indians and other tribes studying their sign language. In addition to an alphabetical cataloguing of signs, Clark gives valuable background information on many tribes and their history and customs. Considered the classic of its field, this book provides, entirely in prose form, how to speak the language entirely through sign language, without one diagram provided. 1861-1891 include meteorological reports. Handbook of Defence Electronics and Optronics Anil K. Maini, Former Director, Laser Science and Technology Centre, India First complete reference on defence electronics and optronics

Fundamentals, Technologies and Systems This book provides a complete account of defence electronics and optronics. The content is broadly divided into three categories: topics specific to defence electronics; topics relevant to defence optronics; and topics that have both electronics and optronics counterparts. The book covers each of the topics in their entirety from fundamentals to advanced concepts, military systems in use and related technologies, thereby leading the reader logically from the operational basics of military systems to involved technologies and battlefield deployment and applications.

Key features:

- Covers fundamentals, operational aspects, involved technologies and application potential of a large cross-section of military systems. Discusses emerging technology trends and development and deployment status of next generation military systems wherever applicable in each category of military systems.
- Amply illustrated with approximately 1000 diagrams and photographs and around 30 tables.
- Includes salient features, technologies and deployment aspects of hundreds of military systems, including: military radios; ground and surveillance radars; laser range finder and target designators; night visions devices; EW and EO jammers; laser guided munitions; and military communications equipment and satellites.

Handbook of Defence Electronics and Optronics is an essential guide for graduate students, R&D scientists, engineers engaged in manufacturing defence equipment and professionals handling the operation and maintenance of these systems in the Armed Forces. The work covers military signaling and the weather service. The latter brand was transferred

in 1890, to the Weather Bureau, organized under the Dept. of Agriculture. This volume serves as a companion to Rebecca Robbins Raines's narrative branch history, *Getting the Message Through*, published in 1996. Together these volumes provide an invaluable reference tool for anyone interested in the institutional or organizational history of the Signal Corps. --Foreword.

Rodent Societies synthesizes and integrates the current state of knowledge about the social behavior of rodents, providing ecological and evolutionary contexts for understanding their societies and highlighting emerging conservation and management strategies to preserve them. It begins with a summary of the evolution, phylogeny, and biogeography of social and nonsocial rodents, providing a historical basis for comparative analyses. Subsequent sections focus on group-living rodents and characterize their reproductive behaviors, life histories and population ecology, genetics, neuroendocrine mechanisms, behavioral development, cognitive processes, communication mechanisms, cooperative and uncooperative behaviors, antipredator strategies, comparative socioecology, diseases, and conservation. Using the highly diverse and well-studied Rodentia as model systems to integrate a variety of research approaches and evolutionary theory into a unifying framework, *Rodent Societies* will appeal to a wide range of disciplines, both as a compendium of current research and as a stimulus for future collaborative and interdisciplinary investigations. "Space Sleuths of the Cold War" relates for the first time the inside story of the amateur spies who monitored the Soviet space program

during the Cold War. It is written by many of those “space sleuths” themselves and chronicles the key moments in their discovery of hidden history. This book shows that dedicated observers were often better than professionals at interpreting that information coming out of the USSR during the dark days of the Cold War. This book takes a unique approach to the history of Soviet spaceflight – looking at the personal stories of some of the researchers as well as the space secrets the Soviets tried to keep hidden. The fascinating account often reads like a Cold War espionage novel. “Space Sleuths of the Cold War” includes an impressive list of contributors, such as: Editor Dominic Phelan, giving an overall history of the Cold War hunt for Soviet space secrets. Space writer Brian Harvey reveals his own personal search through official Soviet radio and magazines to find out what they were (and weren't) revealing to the outside world at the height of the space race. Sven Grahn from Sweden details his own 40 year quest to understand what was happening on the other side of the Iron Curtain. Professional American historian Asif Siddiqi explores his own adventures in the once secret Russian archives – often seeing documents never before read by Westerners. Dutch cosmonaut researcher Bert Vis provides an inside account of the Yuri Gagarin training center in Moscow. Belgian researcher Bart Hendrickx's details his important translation of the 1960s' diaries of cosmonaut team leader General Kamanin. Pioneer space sleuth James Oberg's shares his memories of his own notable 'scoops.' Paris-based writer Christian Lardier recounts the efforts of French space sleuths – whose work was frequently overlooked in the

USA and Britain because of the language barrier.
