**The High-Performing Preschool** Feb 02 2021 The High-Performing Preschool takes readers into the lives of three- and four-year-old Head Start students during their first year of school and focuses on the centerpiece of their school day: story acting. In this activity, students act out stories from high-quality children's literature as well as stories dictated by their peers. Drawing on a unique pair of thinkers—Russian psychologist Lev Vygotsky and renowned American teacher and educational writer Vivian G. Paley—Gillian Dowley McNamee elucidates the ways, and reasons, this activity is so successful. She shows how story acting offers a larger blueprint for curricula that helps ensure all preschools—not just those for society's well-to-do—are excellent. McNamee outlines how story acting cultivates children's oral and written language skills. She shows how it creates a crucial opportunity for teachers to guide children inside the interior logic and premises of an idea, and how it fosters the creation of a literary community.

Starting with Vygotsky and Paley, McNamee paints a detailed portrait of high-quality preschool teaching, showing how educators can deliver on the promise of Head Start and provide a setting for all young children to become articulate, thoughtful, and literate learners.

**Preschool in Three Cultures Revisited** Feb 20 2020 Published twenty years ago, the original *Preschool in Three Cultures* was a landmark in the study of education: a profoundly enlightening exploration of the different ways preschoolers are taught in China, Japan, and the United States. Here, lead author Joseph Tobin—along with new collaborators Yeh Hsueh and Mayumi Karasawa—revisits his original research to discover how two decades of globalization and sweeping social transformation have affected the way these three cultures educate and care for their youngest pupils. Putting their subjects' responses into historical perspective, Tobin, Hsueh, and Karasawa analyze the pressures put on schools to evolve and to stay the same, discuss how the teachers adapt to these demands, and examine the patterns and processes of continuity and change in each country. Featuring nearly one hundred stills from the videotapes, *Preschool in Three Cultures Revisited* artfully and insightfully illustrates the surprising, illuminating, and at times entertaining experiences of four-year-olds—and their teachers—on both sides of the Pacific.

*Science and Engineering in Preschool Through Elementary Grades: The Brilliance of Children and the Strengths of Educators* Feb 14 2022 Starting in early childhood, children are capable of learning sophisticated science and engineering concepts and engage in disciplinary practices. They are deeply curious about the world around them and eager to investigate the many questions they have about their environment. Educators can develop learning environments that support the development and demonstration of proficiencies in science and engineering, including making connections across the contexts of learning, which can help children see their ideas, interests, and practices as meaningful not just for school, but also in their lives. Unfortunately, in many preschool and elementary schools science gets relatively little attention compared to English language arts and mathematics. In addition, many early childhood and elementary teachers do not have extensive grounding in science and engineering content. *Science and Engineering in Preschool through Elementary Grades* provides evidence-based guidance on effective approaches to preschool through elementary science and engineering instruction that supports the success of all students. This report evaluates the state of the evidence on learning experiences prior to school; promising instructional approaches and what is needed for implementation to include teacher professional development, curriculum, and instructional materials; and the policies and practices at all levels that constrain or facilitate efforts to enhance preschool through elementary science and engineering. Building a solid foundation in science and engineering in the elementary grades sets the stage for later success, both by sustaining and enhancing students' natural enthusiasm for science and engineering and by establishing the knowledge and skills they need to approach the more challenging topics introduced in later grades. Through evidence-based guidance on effective approaches to preschool through elementary science and engineering instruction, this report will help teachers to support the success of all students.

**Developmentally Appropriate Practice in Early Childhood Programs Serving Children from Birth Through Age 8, Fourth Edition (Fully Revised and Updated)** May 25 2020 The long-awaited new edition of NAEYC's book *Developmentally Appropriate Practice in Early Childhood Programs* is here, fully revised and updated! Since the first edition in 1987, it has been an essential resource for the early childhood education field. Early childhood educators have a professional responsibility to plan and implement intentional, developmentally appropriate learning experiences that promote the social and emotional development, physical development and health, cognitive development, and general learning competencies of each child served. But what is developmentally appropriate practice (DAP)? DAP is a framework designed to promote young children's optimal learning and development through a strengths-based approach to joyful, engaged learning. As educators make decisions to support each child's learning and development, they consider what they know about (1) commonality in children's development and learning, (2) each child as an individual (within the context of their family and community), and (3) everything discernible about the social and cultural contexts for each child, each educator, and the program as a whole. This latest edition of the book is fully revised to underscore the critical role social and cultural contexts play in child development and learning, including new research about implicit bias and teachers' own context and consideration of advances in neuroscience. Educators implement developmentally appropriate practice by recognizing the many assets all young children bring to the early learning program as individuals and as members of families and communities. They also develop an awareness of their own context. Building on each child's strengths, educators design and implement learning settings to help each child achieve their full potential across all domains of development and across all content areas.

*Preschool Education in America* May 17 2022 A history of policies and programmes for the education of three-to-five-year-olds in the USA. This book also traces efforts to make pre-school education a part of the American public school system and shows why these efforts have been rejected, despite evidence of pre-school benefit.

**Common Characteristics and Unique Qualities in Preschool Programs** Aug 28 2020 We live in a world that is transitioning from focus on early childhood education within individual countries into a global perspective that considers how early childhood education is conducted in many diverse cultures and environments. The challenge on a global basis is how to develop programs in countries and environments that are different from a specifically western perspective. Economic, geographic, and cultural influences infuse early childhood programs around the world. In 1999, a group of educators representing 36 countries developed guidelines for establishing minimum standards for preschool programs. A purpose for developing the guidelines was to provide guidance for countries that wished to evaluate and improve their own programs. A second purpose was to help developing countries initiating preschools to have relevant information about quality programs. The later development of an assessment tool based on the Global Guidelines served as a vehicle to use the guidelines to assess a single program or multiple programs. The continuing work with these guidelines in many countries throughout the world since 2000 has resulted in the collection of information that reveals the uniqueness of programs in different countries.

[A Vision for Universal Preschool Education](#) Sep 09 2021 Decades of research point to the need for a universal preschool education program in the U.S. to help give our nation's children a sound cognitive and social foundation on which to build future educational and life successes. In addition to enhanced school readiness and improved academic performance, participation in high quality preschool programs has been linked with reductions in grade retentions and school drop out rates, and cost savings associated with a diminished need for remedial educational services and justice services. This 2006 book brings together nationally renowned experts from the fields of psychology, education, economics and political science to present a compelling case for expanded access to preschool services. They describe the social, educational, and economic benefits for the nation as a whole that may result from the implementation of a universal preschool program in America, and provide guiding principles upon which such a system can best be founded.

The preschool years—when children are between the ages of two and five—are the most influential, important years in a child's life. Angela C. Santomero, MA, the award-winning creator of children's television phenomena knows this better than anyone and has spent decades working to instill confidence in her young viewers. In *Preschool Clues*, she breaks down the philosophy behind her shows—educating, inspiring, and empowering kids—into concrete strategies that parents and educators can incorporate into their family and classroom to set their preschoolers up for success, such as: -Intentionally pausing to foster bonding, independence, and resilience -Developing empathy and confidence through soliciting preschoolers' help -Becoming "fluent" in the language of preschoolers: Play -Igniting your preschooler's curiosity -Being an involved co-player everyday -Designing a healthy media diet In *Preschool Clues*, Angela shares the latest research from top thinkers in child development and education. **Fun in the sun** Nov 30 2020 Come let's run to the hill with Leo and spend a beautiful sunny day with him and his pal Tim. Have you observed that the majority of preschool and early reader books follow the technique of teaching random three-letter words, initial words, and phrases? Random words and sentences do not instill a love of reading in children. This is why we wanted to give the little early readers a bit more flavor, so we made storybooks with three-letter words. Reading a storybook instead of some random words can offer children more excitement and provide their preschool learning a much-needed boost. Our goal is to not only provide an immersive reading experience for the children through a delicate storyline and bright illustrations but also to involve them in the process. We want kids to think about and participate in the story. This is why we've included coloring pages and other interactive activities, as well as worksheets where kids can test their memory and reading skills, and a section where they'll be asked a few questions about themselves in line with the story so they can express their thoughts. All of our books have been created with the goal of being the best preschool or beginning readers books available. Why spend time teaching your children only phonics and first words when they can read entire books?
