This book is open access under a CC BY-NC 4.0 license. This revised, updated textbook presents a systems approach to the planning, management, and operation of water resources infrastructure in the environment. Previously published in 2005 by UNESCO and Deltares (Delft Hydraulics at the time), this new edition, written again with contributions from Jerry R. Stedinger, Jozef P. M. Dijkman, and Monique T. Villars, is aimed equally at students and professionals. It introduces readers to the concept of viewing issues involving water resources as a system of multiple interacting components and scales. It offers guidelines for initiating and carrying out water resource system planning and management projects. It introduces alternative optimization, simulation, and statistical

methods useful for project identification, design, siting, operation and evaluation and for studying post-planning issues. The authors cover both basin-wide and urban water issues and present ways of identifying and evaluating alternatives for addressing multiple-purpose and multi-objective water quantity and quality management challenges. Reinforced with cases studies, exercises, and media supplements throughout, the text is ideal for upper-level undergraduate and graduate courses in water resource planning and management as well as for practicing planners and engineers in the field. Management Planning for Cultural Heritage challenges traditional perceptions of and about the heritage planning process while also presenting a comprehensive analysis of the ever-widening field of Cultural Heritage Conservation. Drawing on the authors' experience in teaching and involvement in international practice, the book examines the changes that are taking place in modes of thinking about heritage as part of increasingly complex urban transformations, and considers how these must engage with, and inform, professional practice. The book also acknowledges that international best practice has developed a great deal over the last 40 years and needs to be adapted, applied and refined through the recognition and application of regional values - tangible and intangible - based on cultural attitudes and practices. Emphasising the critical role of heritage planning and management in guiding change, Taylor and Verdini argue that this is especially critical if we are to safeguard values, identity and significance. In this sense, heritage is understood not only as a technical process but also as a social construct. The book therefore promotes a people-centred approach to cultural heritage management. Management Planning for Cultural Heritage will be of interest to students, scholars and practitioners working in heritage studies and conservation. While the text has professional application, it also sets out to present a sound theoretical foundation relevant to the body of knowledge associated with management of cultural heritage places. Easy-to-follow and understand, The Systems Thinking Approach to Strategic Planning and Management presents the first practical application of "systems thinking", a concept first introduced by Peter Senge in the Fifth Discipline as a new, better and elegantly simple A-B-C approach to strategic management, planning, and change. According to the UNESCO Operational Guidelines, the purpose of a management plan is to ensure the effective protection of the nominated property for present and future generations. This requirement was in part necessitated by the need to implement real systems of monitoring on the management of World Heritage Sites. Since its implementation in 2005, discussion on the function and the contents of management plans for World Heritage Sites has grown tremendously. The discussions have mainly been focused on the theoretical frameworks of World Heritage site management plans and proposals of practical guidelines for their implementation. This volume provides a platform for heritage practitioners, especially those working at Cultural World Heritage Sites, to put in writing their experiences and impressions about the implementation of site management plans at properties that are inscribed on the WHL. Cultural World Heritage Sites in this case refer to world heritage properties such as archaeological sites, cultural landscapes, religious sites and architectural structures. The book also seeks to examine the extent to which site management plans have been or are being implemented at Cultural World Heritage Sites. **Principles of Management** is designed to meet the scope and sequence requirements of the introductory course on management.
