Evaluating the performance of various types of hyperspectral vegetation indices in characterizing agricultural crops, this volume discusses non-invasive quantification of foliar pigments, leaf nitrogen concentration of cereal crop, the estimation of nitrogen content in crops and pastures, forest leaf chlorophyll content, among others. Each chapter reviews existing “state-of-art” knowledge, highlights the advances made, and provides guidance for appropriate use of hyperspectral images in study of vegetation. The concluding chapter provides readers with the editor’s view and guidance on the highlights and the essence of the Volume 2 and the editor’s perspective. Complements the International Producer Price Index Manual (PPI Manual) published by the IMF in 2004, by adding detailed descriptions of PPI measurement in a series of specific service industries. This unique handbook collects together a comprehensive and up-to-date range of indices measuring construction costs and price movements. The authors give guidance on the use of the data making this an essential aid to accurate estimating. It includes many examples how construction cost and price indices are compiled and how they can be used by the estimator in tender analysis, pricing and price adjustment, cost planning and forecasting. Power Quality (PQ) indices are a powerful tool for quickly quantifying PQ disturbances. They also serve as the basis for illustrating the negative impact of electrical disturbances on components and for assessing compliance with the required standards and recommendations within a regulating framework. Within these pages lies a comprehensive overview of both the traditional PQ indices in use today and new indices likely to be used in the future. Key features of this book include: a special focus on the metrics for quantifying PQ disturbances; a complete review of methods and indices for assessing disturbance responsibilities between customers and utilities; a survey on PQ objectives around the world, with highlights on the economic aspects of PQ disturbances.

Inside, you will find a thorough and well-balanced treatment on theoretical concepts and practical applications, enhanced by examples and exercises of PQ indices computation and use. This is an important resource for academics, students of power quality, reliability and electrical power systems courses, and also for practicing engineers involved in solving PQ problems in the new structures of liberalised energy markets. Under what conditions are expressions of a language the same; when are they different? *Indices and Identity* focuses on this question in the context of the theory of anaphora and on the role of indices in characterizing syntactic and semantic identity of expressions. Fiengo and May develop two main themes within the theory of anaphora. The first pertains to the meaning of coindexing and non-coindexing--the correspondence between indexical relations among expressions and the valuation relation that holds among them--while the second is the development of Dependency Theory, the theory of the relations of occurrences of indices. The novelty of Fiengo and May's approach lies with their characterization of indexical dependencies and the conditions under which structures manifest the same or different dependency. In particular, *Indices and Identity* emphasizes issues raised by strict and sloppy identity in ellipsis, exploring what Fiengo and May call the eliminative puzzles of ellipsis. The significance of these puzzles is that they show the shortcomings of current theories of anaphora in ellipsis, while illustrating an application of Dependency Theory to complex cases of strict and sloppy identity. Elliptical contexts in turn lead to consideration of the embedding of the formal syntactic notions of identity arising from indices and dependencies within more general notions of structural identity. This relates to a consideration of the foundations of reconstruction, which, the authors argue, is syntactic identity up to indexical identity and vehicle change--variation in the syntactic form of expression of arguments. The book concludes with a discussion of the relation of reconstruction, logical representation in grammar, and the application of grammatical constraints. The discussion focuses on antecedent contained deletion, and stands independently as a comprehensive study of this construction. Linguistic Inquiry Monograph No. 24

This valuable resource contains descriptive profiles along with historical performance data on 300 of the world's leading global, regional, and local securities market indices and subindices covering 10 asset classes. This book covers water quality indices (WQI) in depth – it describes what purpose they serve, how they are generated, what are their strengths and weaknesses, and how to make the best use of them. It is a concise and unique guide to WQIs for chemists, chemical/environmental engineers and government officials. Whereas it is easy to express the quantity of water, it is very difficult to express its quality because a large number of variables determine the water quality. WQIs seek to resolve the difficulty by translating a set of a large number of variables to a one-digit or a two-digit numeral. They are essential in communicating the status of different water resources in terms of water quality and the impact of various factors on it to policy makers, service personnel, and the lay public. Further they are exceedingly useful in the monitoring and management of water quality. With the importance of water and water quality increasing exponentially, the importance of this topic is also set to increase enormously because only with the use of indices is it possible to assess, express, communicate, and monitor the overall quality of any water source. Provides a concise guide to WQIs: their purpose and generation Compares existing methods and WQIs and outlines strengths and weaknesses Makes recommendations on how the indices should be used and under what circumstances they apply This publication compares key aspects of statistical methodologies used by OECD member countries in the compilation of price indicators. The use of numbers to condense complex systems into easily digested 'bites' of information is very much in fashion. At one level they are intended to enhance transparency, accountability and local democracy, while at another they provide a means of enhancing performance. However, all indicators suffer from the same basic problem that, ironically, is also their biggest advantage - condensing something highly complex into a few simple numbers. Love them or hate them, there is no denying that people use indicators to make decisions. *Indices and Indicators* explores the use of indicators within the field of human development. Part I provides a brief outline of the contested meaning of 'development' and how indices and indicators have been used as means of testing the realization of these development visions in practice in a range of institutional contexts. Part II discusses the limitations of such indices and indicators and illustrates how they are dependent upon the vision of development adopted. The book also suggests how indices and indicators can best be employed

and presented. Given our overwhelming reliance on indices and indicators for measuring progress, directing policy and allocating resources, this book is essential core reading for academics, undergraduate and post-graduate students in social science, economics, geography and development studies as well as development practitioners, policy-makers and donor and international funding agencies. First Published in 1986, this book explores the application of Selection Indices in the process of plant breeding. Carefully compiled and filled with a vast repertoire of notes, diagrams, and references this book serves as a useful reference for Students of Medicine, Chiropractors, and other practitioners in their respective fields. Providing a single-valued assessment of the performance of a process is often one of the greatest challenges for a quality professional. Process Capability Indices (PCIs) precisely do this job. For processes having a single measurable quality characteristic, there is an ample number of PCIs, defined in literature. The situation worsens for multivariate processes, i.e., where there is more than one correlated quality characteristic. Since in most situations quality professionals face multiple quality characteristics to be controlled through a process, Multivariate Process Capability Indices (MPCIs) become the order of the day. However, there is no book which addresses and explains different MPCIs and their properties. The literature of Multivariate Process Capability Indices (MPCIs) is not well organized, in the sense that a thorough and systematic discussion on the various MPCIs is hardly available in the literature. Handbook of Multivariate Process Capability Indices provides an extensive study of the MPCIs defined for various types of specification regions. This book is intended to help quality professionals to understand which MPCIs should be used and in what situation. For researchers in this field, the book provides a thorough discussion about each of the MPCIs developed to date, along with their statistical and analytical properties. Also, real life examples are provided for almost all the MPCIs discussed in the book. This helps both the researchers and the quality professionals alike to have a better understanding of the MPCIs, which otherwise become difficult to understand, since there is more than one quality characteristic to be controlled at a time. Features: A complete guide for quality professionals on the usage of different MPCIs. A step by step discussion on multivariate process capability analysis, starting from a brief discussion on univariate indices. A single source for all kinds of MPCIs developed so far. Comprehensive analysis of the MPCIs, including analysis of real-life data. References provided at the end of each chapter encompass the entire literature available on the respective topic. Interpretation of the MPCIs and development of threshold values of many MPCIs are also included. This reference book is aimed at the post graduate students in Industrial Statistics. It will also serve researchers working in the field of Industrial Statistics, as well as practitioners requiring thorough guidance regarding selection of an appropriate MPCIs suitable for the problem at hand. The importance of house prices to households, real estate developers, banks and policy-makers cannot be overemphasised. House price changes affect consumer spending and business investment patterns, which in turn affect the wider macro economy and the entire business cycle. Measuring and understanding house prices is therefore essential to a functioning economy, but researchers continue to disagree on the best methodological approach for constructing real estate indices. This book argues the need for more accurate house price indices, outlines the various methods used to construct indices and discusses the existing house price indices around the globe. It shows how the raw data of property transactions can be prepared for the purpose of constructing indices, discusses various applications of property price indices and empirically demonstrates how the index numbers can be used to model the supply of new houses and to estimate the price elasticity of supply. Essential reading for economists, real estate professionals and researchers, and policy-makers. Indices, index funds and ETFs are grossly inaccurate and inefficient and affect more than €120 trillion worth of securities, debts and commodities worldwide. This book analyzes the mathematical/statistical biases, misrepresentations, recursiveness, nonlinear risk and homomorphisms inherent in equity, debt, risk-adjusted, options-based, CDS and commodity indices – and by extension, associated index funds and ETFs. The book characterizes the “Popular-Index Ecosystems,” a phenomenon that provides artificial price-support for financial instruments, and can cause systemic risk, financial instability, earnings management and inflation. The book explains why indices and strategic alliances invalidate Third-Generation Prospect Theory (PT3), related approaches and most theories of Intertemporal Asset Pricing. This book introduces three new

decision models, and some new types of indices that are more efficient than existing stock/bond indices. The book explains why the Mean-Variance framework, the Put-Call Parity theorem, ICAPM/CAPM, the Sharpe Ratio, Treynor Ratio, Jensen's Alpha, the Information Ratio, and DEA-Based Performance Measures are wrong. Leveraged/inverse ETFs and synthetic ETFs are misleading and inaccurate and non-legislative methods that reduce index arbitrage and ETF arbitrage are introduced. This Handbook provides, for the first time, comprehensive guidelines for the compilation of Residential Property Price Indexes and explains in depth the methods and best practices used to calculate an RPPI. This Handbook on Diversity and Inclusion Indices critically examines many of the popular and frequently cited indices related to DEI benchmarking and progress tracking. The goal is to provide a better understanding of the indices' construction, strengths and weaknesses, intended applications, contribution to research and progress towards diversity and equity goals. This research explores observed, simulated, and projected extreme climate indices from a selection of different GCMs from CMIP5 ensemble for Pakistan at province level. The extreme indices for observed, simulated and projected climate are found and analysed on provincial basis over the country. Pakistan has been facing shortages in both the power and water sector which are the lifelines of the country. Significant increases in the maximum and minimum temperatures over the country may affect such sectors drastically. Considerable increase in the frequency and intensity of extreme weather events, coupled with erratic monsoon rains may cause frequent and intense floods and droughts in the region. Rising temperatures resulting in enhanced heat and water-stressed conditions, particularly in arid and semi-arid regions, may lead to reduced agricultural productivity. This report shall bring added value to all stakeholders and policy makers in determining the hazards that extreme climate has brought in the past and may bring in the near future.
