Ancient Piñon-juniper Woodlands Feb 19 2020 This book gathers together noted scientists and historians to celebrate the varied and unique woodland region surrounding Mesa Verde National Park. One of the most widespread habitat types in the West, piñon-juniper woodlands have faced extensive eradication, grazing pressures, and the encroachment of human developments, and, consequently, only a few mature stands have reached their full growth potential. Mesa Verde Country, with its deep canyons and high ridgetops, is the magnificent home of many of these ancient stands. Impressively broad in scope, Floyd's volume thoroughly explores Mesa Verde Country's important and historic ecosystem. Covering such diverse topics as geologic evolution, natural history, human history, bats, and fungi, to name but a few, this volume will appeal to scientists, resource managers, conservationists, and the lay reader with an interest in this most western of ecosystems.

Mysteries of the Hopewell Feb 13 2022 Buried beneath today's Midwestern towns, under several layers

of earth and the accumulated debris of two thousand years, are the clues to an ancient mystery. A Native American people, now known as the Hopewell, lived and worked these lands, building earthworks which in some instances dwarf the ruins at Stonehenge. More significantly, these mammoth earthworks were built in different geometric shapes, using a standard unit of measure and aligned to the cycles of the sun and the moon. Using the foundation of existing scholarship, *Mysteries of the Hopewell* presents new discoveries showing the accomplishments of the Mound Builders in astronomy, geometry, measurement, and counting. William Romain then goes one step further to theorize why generations of people toiled to move millions of tons of earth to form these precise structures, joining the ranks of the Egyptians, Mayans, Greeks, Chinese, and other advanced ancient cultures. William Romain's *Mysteries of the Hopewell* will appeal to many readers, including anthropologists, mathematicians, and historians, but perhaps especially to readers curious about ancient cultures and seeking explanations for these magnificent earthen structures.

Small Mammals in Successional Prairie Woodlands of the Northern Great Plains Apr 03 2021 Prairie woodlands comprise about 1 percent of the landscape in the northern Great Plains. However, prairie woodlands provide habitat for far more than 1 percent of the wildlife species that occur in the prairie region. With increasing pressures on natural resources, managers need methods for managing wildlife habitat and biodiversity that are based on ecological processes. We studied the small mammals and vegetation in seral stages of four woodland types in central South Dakota. None of the species was restricted to a single seral stage, but abundance of some small mammals varied depending on seral stages of woodland types. To ensure the biodiversity of the prairie, managers should retain all seral stages of all prairie woodlands.

[California Forests and Woodlands](#) May 16 2022 From majestic Redwoods to ancient Western Bristlecone Pines, California's trees have long inspired artists, poets, naturalists—and real estate developers. Verna Johnston's splendid book, illustrated with her superb color photographs and Carla Simmons's detailed black-and-white drawings, now offers an unparalleled view of the Golden State's world-renowned forests and woodlands. In clear, vivid prose, Johnston introduces each of the state's dominant forest types. She describes the unique characteristics of the trees and the interrelationships of the plants and animals living among them, and she analyzes how fire, flood, fungi, weather, soil, and humans have affected the forest ecology. The world of forest and woodland animals comes alive in these pages—the mating games, predation patterns, communal life, and the microscopic environment of invertebrates and fungi are all here. Johnston also presents a sobering view of the environmental hazards that threaten the state's trees: acid snow, ozone, blister rust, over-logging. Noting the interconnectedness of the diverse life forms within tree regions, she suggests possible answers to the problems currently plaguing these areas. Enriched by the observations of early naturalists and Johnston's many years of fieldwork, this is a book that will be welcomed by all who care about California's treasured forests and woodlands.

Wildflowers of Iowa Woodlands Jan 24 2023 This classic of midwestern natural history is back in print with a new format and new photographs. Originally published in 1979, *Wildflowers of Iowa Woodlands* introduced many naturalists to the beauty and diversity of the native plants of the wooded communities that once covered more than 6 million acres of the state. Now redesigned with updated names and all-new images, this reliable field companion will introduce woodland wildflowers to a new generation of outdoor enthusiasts in the Upper Midwest. The species accounts are accompanied by brilliant full-page color photographs by Larry Stone, Thomas Rosburg, and Carl Kurtz. In clear, straightforward, and accessible prose, authors Sylvan Runkel and Alvin Bull provide common, scientific, and family names; the Latin or Greek meaning of the scientific names; habitat and blooming times; and a complete description of plant, flower, and fruit. Particularly interesting is the information on the many ways in which Native Americans and early pioneers used these plants for everything from pain relief to insecticides to tonics. Iowa's original savannas, woodlands, and forests were cleared with amazing thoroughness, yet enough beauty and diversity remain to give joy to hikers, birders, and mushroomers. *Wildflowers of Iowa Woodlands* will inspire both amateurs and professionals with the desire to learn more about the wonders of today's woodlands.

Reforming Suburbia Mar 22 2020 The "new community" movement of the 1960s and 1970s attempted a grand experiment in housing. It inspired the construction of innovative communities that were designed to counter suburbia's cultural conformity, social isolation, ugliness, and environmental problems. This richly documented book examines the results of those experiments in three of the most successful new communities: Irvine Ranch in Southern California, Columbia in Maryland, and The Woodlands in the suburbs of Houston, Texas. Based on new research and interviews with developers, designers, and residents, Ann Forsyth traces the evolution, the successes, and the shortcomings of these experiments in urban innovation. Where they succeeded, in areas such as community identity and open space preservation, they provide support for current "smart growth" proposals. Where they did not, in areas such as housing affordability and transportation choices, they offer important insights for today's planners, designers, developers, civic leaders, and others interested in incorporating new forms of development into their designs.

Secrets of the Oak Woodlands Sep 20 2022 A Californian may vacation in Yosemite, Big Sur, or Death Valley, but many of us come home to an oak woodland. Yet, while common, oak woodlands are anything but ordinary. In a book rich in illustration and suffused with wonder, author Kate Marianchild combines extensive research and years of personal experience to explore some of the marvelous plants and animals that the oak woodlands nurture. Acorn woodpeckers unite in marriages of up to ten mates and raise their young cooperatively. Ground squirrels roll in rattlesnake skins to hide their scent from hungry snakes. Manzanita's rust-colored, paper-thin bark peels away in time for the summer solstice, exposing sinuous contours that are cool to the touch even on the hottest day. Conveying up-to-the-minute scientific findings with a storyteller's skill, Marianchild introduces us to a host of remarkable creatures in a world close by, a world that "rustles, hums, and sings with the sounds of wild things."

Native American Speakers of the Eastern Woodlands: Selected Speeches and Critical Analyses Nov 10 2021 This collection of essays examines, in context, eastern Native American speeches, which are translated and reprinted in their entirety. Anthologies of Native American orators typically focus on the rhetoric of western speakers but overlook the contributions of Eastern speakers. The roles women played, both as speakers themselves and as creators of the speeches delivered by the men, are also commonly overlooked. Finally, most anthologies mine only English-language sources, ignoring the fraught records of the earliest Spanish conquistadors and French adventurers. This study fills all these gaps and also challenges the conventional assumption that Native thought had little or no impact on liberal perspectives and critiques of Europe. Essays are arranged so that the speeches progress chronologically to reveal the evolving assessments and

responses to the European presence in North America, from the mid-sixteenth century to the twentieth century. Providing a discussion of the history, culture, and oratory of eastern Native Americans, this work will appeal to scholars of Native American history and of communications and rhetoric. Speeches represent the full range of the woodland east and are taken from primary sources.

Woodlands (Collins New Naturalist Library, Book 100) Oct 21 2022 The 100th volume of the prestigious New Naturalist series, written by one of Britain's best-known naturalists, explores the significance and history of woodlands on the British landscape

Trees and Woodlands Oct 29 2020 Features almost 300 colour photographs and brings together more than 60 years of research by a leading voice in British woodland ecology. Trees define woodland. They provide a complex, multi-layered habitat for a great range of wildlife, but they are also wildlife themselves, reacting to their circumstances and each other. Woodlands are important to people, supplying timber, food and fuel, accumulating carbon, and offering places of refuge and refreshment. But they are also under threat: some stand in the way of 'progress', and all are becoming increasingly vulnerable to disease and climate change. In *Trees and Woodlands*, George Peterken brings together decades of scientific research, while also incorporating his personal experiences, to explore the ecology, nature conservation and wider cultural value of our native trees and shrubs, and the various ways they have combined as woodland.

Peterken accepts that all woodlands have been shaped by people as well as nature, and he describes the long history of use and management and how this has influenced woodland wildlife. Woodlands have also contributed to our art, beliefs and social attitudes, and this too is examined. He concludes by asking, what next for Britain's trees and woodlands? He advocates woods being managed and their timber and small wood being put to good use, but recognises that this is all part of a larger question: the future of ourselves. Containing nearly 300 photographs, and interspersed with box texts describing the history and ecology of representative woods across Britain, this is a commentary on trees, woodlands and our relationship with them from one of our most highly regarded forest ecologists.

Miombo Woodlands in a Changing Environment: Securing the Resilience and Sustainability of People and Woodlands Feb 01 2021 Based on work by the Miombo Network in southern Africa, this book helps decision-makers and general readers alike improve their understanding of the socio-ecology of the Miombo woodlands across southern Africa. It also highlights the importance of and the need for further research on the unique Miombo ecology and its link with economic development. One major challenge facing these woodlands is the influence that direct (both natural and anthropogenic) and indirect drivers of change, as well as interactions between these, have had over the centuries. As such the book explores the socio-economic and ecological interactions that occur in these woodlands and discusses the need for further research to provide a better understanding of these interactions. Drawing on data and information from numerous studies conducted in the last 20 years, the book presents a comparative analysis of policy changes and management experiences in the countries concerned. It also addresses issues of global climate change, since they have an impact on Miombo ecosystem management and restoration, and provides future projections based on an assessment of how climate change has affected the Miombo woodlands in the past.

Acorns and Bitter Roots Aug 07 2021 --StartFragment-- Starch grain analysis in the temperate climates of eastern North America using the Delaware River Watershed as a case study for furthering scholarly understanding of the relationship between native people and their biophysical environment in the Woodland Period People regularly use plants for a wide range of utilitarian, spiritual, pharmacological, and dietary purposes throughout the world. Scholarly understanding of the nature of these uses in prehistory is particularly limited by the poor preservation of plant resources in the archaeological record. In the last two decades, researchers in the South Pacific and in Central and South America have developed microscopic starch grain analysis, a technique for overcoming the limitations of poorly preserved plant material. Messner's analysis is based on extensive reviews of the literature on early historic, prehistoric native plant use, and the collation of all available archaeobotanical data, a review of which also guided the author in selecting contemporary botanical specimens to identify and in interpreting starch residues recovered from ancient plant-processing technologies. The evidence presented here sheds light on many local ecological and cultural developments as ancient people shifted their subsistence focus from estuarine to riverine settings. These archaeobotanical datasets, Messner argues, illuminate both the conscious and unintentional translocal movement of ideas and ecologies throughout the Eastern Woodlands.

Cork Oak Woodlands on the Edge Nov 22 2022 Cork oak has historically been an important species in the western Mediterranean—ecologically as a canopy or “framework” tree in natural woodlands, and culturally as an economically valuable resource that underpins local economies. Both the natural woodlands and the derived cultural systems are experiencing rapid change, and whether or not they are resilient enough to adapt to that change is an open question. *Cork Oak Woodlands on the Edge* provides a synthesis of the most up-to-date, scientific, and practical information on the management of cork oak woodlands and the cultural systems that depend on cork oak. In addition, *Cork Oak Woodlands on the Edge* offers ten site profiles written by local experts that present an in-depth vision of cork oak woodlands across a range of biophysical, historical, and cultural contexts, with sixteen pages of full-color photos that illustrate the tree, agro-silvopastoral systems, products, resident biodiversity, and more. *Cork Oak Woodlands on the Edge* is an important book for anyone interested in the future of cork oak woodlands, or in the management of

cultural landscapes and their associated land-use systems. In a changing world full of risks and surprises, it represents an excellent example of a multidisciplinary and holistic approach to studying, managing, and restoring an ecosystem, and will serve as a guide for other studies of this kind.

Cave Archaeology of the Eastern Woodlands Mar 14 2022 Patty Jo Watson's prolific career began in the early 1950s as an energetic graduate student at the University of Chicago and culminated with her induction into the National Academy of Sciences and subsequent retirement from Washington University in 2003. During that time her groundbreaking research impacted multiple fields within the discipline of archaeology, but her astonishing research into the underground caves of the eastern United States recognizes her as one of the world's leading experts on cave archaeology. In honor of Dr. Watson and her monumental achievements in the field, twenty-two established scholars present in this volume new and insightful research into prehistoric and historic use of southeastern dark zones. Cave Archaeology of the Eastern Woodlands, edited by David H. Dye, explores how prehistoric and historic peoples utilized caves as a means to further their economic growth and represent cultural values within their societies. The essays range in topics from early gypsum mining to rare American Indian cave art, from historic saltpeter extraction to current archaeobotanical and paleofecal research. Dye and the contributors contend that studies of deep zone caves reveal multiple insights into the values, beliefs, and cultural lifeways of ancient and historic peoples. In addition to presenting new research in the field, contributors also place particular emphasis on Dr. Watson's influential cave research and how it has molded their own work. The essays convey a sense of wonder at the unique and sometimes harrowing world of caves, and readers will get a sense of why Native Americans regarded the Underworld or Beneathworld as a supernatural realm to be tread upon with great respect and caution. This volume of uniformly excellent essays will no doubt be a lantern that sheds light onto the importance of studying and understanding the all too secret world of underground caves. David H. Dye is professor of archaeology in the Department of Earth Sciences at the University of Memphis and a former student of Patty Jo Watson's. He is author of Cycles of Violence: An Archaeology of Peace and War in Native Eastern North American, coeditor, with Richard J. Chacon, of The Taking and Displaying of Human Body Parts as Trophies by Amerindians, and, with Cheryl Anne Cox, of Towns and Temples Along the Mississippi.
